#### **DETAILED ACTION**

## Claim Rejections - 35 USC § 112

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 1-19 is rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the enablement requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention. The specification does not provide any description of the "deformable stem" and the "plug member" to support the pending claims. In order to comply with the requirements of 35 U.S.C. 112, first paragraph, correction is required.

## Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

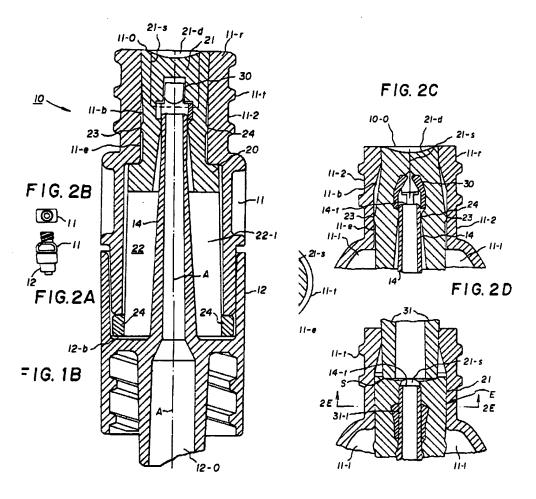

Claims 1-19 are rejected under 35 U.S.C. 103(a) as being unpatentable over

Paradis (6,079,432) in view of Brony (5,620,434). The Paradis patent shows in figures

1B, 2C, and 2D, a valve engageable with an instrument, the valve comprising a valve

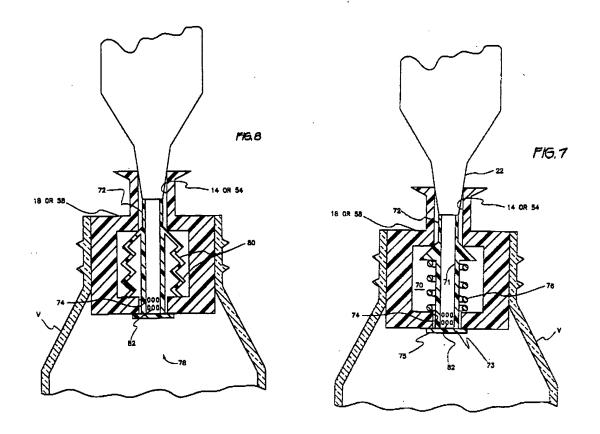

**Art Unit: 3763** 

body, a deformable stem (20) located in the valve body and shiftable therein, the stem

having an aperture configured such that when the instrument is engaged with the aperture in the stem, the stem shifts within the valve body and the aperture deforms to allow liquid to flow therethrough and a plug member (14) in the stem. Parasis does not disclose a valve design wherein the plug member (14) is shiftable. However, such designs are well known in the art as evidenced by the teachings of Brony.

Art Unit: 3763

The Brony patent shows in figures 7 and 8 above, two valve designs wherein the plug member is shiftable. Figure 7 shows a shiftable plug member that utilizes a spring (76) to ensure a seal within the valve and pressure against the instrument as it makes contact with the plug member. Similarly, figure 8 utilizes a bellows joint (80) to ensure a seal within the valve and pressure against the instrument as it makes contact with the plug member.

Based on the above observations, for a person of ordinary skill in the art, it would have been obvious to modify the valve design taught by Palasis with a shiftable plug member, as taught by Brony, in view of the conventionality of the shiftable plug member design. Moreover, using shiftable plug member designs that utilize bellows joints,

Art Unit: 3763

ensures the creation of the proper seal within the valve body enhancing the overall capabilities of the valve.

## Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The following patents are considered relevant to the prosecution of this application: 3806086, 5439451, 5360413, EP 0629418, and EP 1243285 B1.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Manuel Mendez whose telephone number is 571-272-4962. The examiner can normally be reached on 0730-1800 hrs.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Mr. Nicholas D. Lucchesi can be reached on 571-272-4977. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
